

## Scenario 01

### Search Functionality

X

"Test the search feature."

#### What's missing

**No product type (e-commerce, hospital), no filter/sort behavior, no empty/invalid input scenarios, no performance angle.**

Context: As a senior QA write a test case for "Test the search feature" for ecommerce applications

Information:

[mandatory] Write 20 test cases including 12 positive and 8 negative test cases

[mandatory] Including sort alphabetically and filter options include method

[mandatory] input should not allow empty and invalid scenarios

[low] input item not available to load relevant

Persona: As a QA lead review the test cases

Style: Create a test cases in tables include testcase id, priority, severity, pre conditions, test steps, expected results, test result

Output: create it downloadable xl sheet

Observation: It created the test cases that I requested and also precise. No need to inputted multiple time with more questions.

Also it provide the correct format that I asked so that I can use directly review and use it in my project.

It suggested to do the advance search. So that my output file should be more precise.

## Scenario 02

### File Upload

X

"Generate test cases for file upload."

### **What's missing**

No file types, no size limits, no success/failure criteria, no security angle (malicious file upload).

Context: As a test engineer needs to create a file upload test cases for hospital patients record detail applications

Information:

[mandatory] Accepts only doc,xls,text, jpeg and png

[strict]Input should not accept the not allowed file format

[mandatory] accepts only file size upto 50mb.

[mandatory]include the test cases to verify the successful upload.

[low] Should notify the user for empty files

[mandatory] should not upload the malicious file

[mandatory] create 15 test cases include 10 positive and 5 negative

Style: create test sceanrios, test case id, test steps, priority,precondition, expected result, actual result and status

Output: create a downloadable word document

### **Scenario 04**

#### **Role-Based Access Control**

X

"Write test cases for user roles."

### **What's missing**

No role types (Admin, Manager, Viewer), no permission matrix, no unauthorized access scenarios, no app domain.

Context: As QA lead writes test document to cover end to end testing applications having role based access including system admin, user administrator, report administrator, application administrator

## Information

[mandatory] The login page include valid user credentials to access the application

[mandatory] Application should load role specific pages

[mandatory] Include 12 test cases include 8 positive and 4 negative scenarios

[mandatory] Password length should be 8 characters and should meet 4 complexities (Upper case, lower case, special character and numbers)

[mandatory] username should unique, it should not allow the same user.

[medium] user may have multiple roles

Style: create test sceanrios, test case id, test steps, priority,precondition, expected result, actual result and status

Output: create a downloadable word document
